

BAKER

Environments For Science™

Value Your Science with CondoCell®

Protect your experiments with CondoCell®. Why compromise? Your research is important. Don't leave your research at risk for contamination. What cell cultures should you protect?

- High value cell lines, such as those isolated from stem and primary cells
- Patient specific tissue-loss means back to the patient for more sampling
- Any cell line you've invested in. Your time, your research, and your resources are high value!

The financial impact of losing a cell line to contamination can be significant. Mitigate that risk with CondoCell®.

BAKER

Environments For Science™

Protect Your Cells with CondoCell®

Contaminant-free and controlled, air-tight culture vessel.

Mitigate the risk of cross contamination between cultures and from room air particulates, while maintaining key environmental conditions.

Allows for limited transport to/from an incubator or workstation while maintaining the culture environment.
